

International Journal of Primatology

The Official Journal of the International Primatological Society

Volume 11, 1990

International Journal of Primatology is a multidisciplinary journal devoted to basic primatology, i.e., to studies in which the primate is studied as such. To this end, the journal brings together laboratory and field studies from such diverse disciplines as anatomy, anthropology, paleontology, psychology, sociology, and zoology. The journal publishes high-quality original articles, short articles, and reviews that have been carefully refereed by experts in the field, and also publishes book reviews. The journal aims to provide a forum for research workers and students in the field of fundamental primatology and to expedite communication between them and other scientists interested in nonhuman primates per se. A representation of an aye-aye on a title page denotes an article or book review in which threatened or endangered species of Primates are subjects.
